If you have to move it manually —
Organize and store heavy objects at a comfortable height

Hazard

Does the cribbing for your flatbed trucks look like this?

Solution

Store cribbing, chains, and even freight at a safe height and location.

Injuries to muscles, tendons and joints can occur when . . .

- Workers must reach or lift heavy objects from the ground or from far away from the body
- Workers remove equipment that is stored incorrectly, or has become tangled, or stuck

How to prevent these injuries

- Provide storage locations and racks for equipment and materials
- Place the equipment as close as possible to the location of use
- Implement a policy of using mechanical equipment or more than one person to lift anything over 40 lbs
- Raise stored materials to eliminate heavy lifting from ground level
