Technical Advisory Committee Membership

The following individuals made application and were selected to serve on the WAC Technical Advisory Committee for the 2004-2005 rules development cycle. See the August 2004 Special Edition of the ELECTRICAL CURRENTS newsletter for WAC development details.

Upcoming Electrical Stakeholder Meetings Are Scheduled

Locations and times have been finalized for the upcoming stakeholder meetings. Regional, Central Office staff will take questions and update stakeholders on the Electrical Program from 6:30 to 8:30 PM at the following locations:

3-Nov Tumwater, 7273 Linderson Way, Auditorium  
15-Nov Yakima, 2011 W Washington Av, Perry Tech  
16-Nov Kennewick, 2721 W 10th Av, Benton PUD  
17-Nov Pullman, 325 SE Paradise, City Hall  
18-Nov Spokane, 901 N Monroe, L&I Office, Rm 4  
7-Dec Tukwila, 12806 Gateway Dr, L&I Office  
8-Dec Everett, 2320 California St.  
9-Dec Mount Vernon, 2300 Market St, Cottontree Inn  
15-Dec Tacoma, 1102 Tacoma Ave. S, Library  
16-Dec Bremerton, 2400 Perry Ave, Perry Grade School  
5-Jan Vancouver, 1200 Fort Vancouver Way, PUD

About the RCW-WAC Rules CD You Received In The Mail

RCW-WAC rules CD’s were mailed in October. It is department policy that if any rule/statute is published for distribution, one free copy of that document must be provided to every individual/entity that is regulated by the document. The rules and statute are posted on the Electrical Website in Adobe .PDF format for viewing and printing by anyone. The department will make paper copies or additional CD’s available at a minimal charge of $5.00 each.

Statistics show that the vast majority of Washington residents either own or have access to a computer. Many may feel the CD is difficult to use in the field, however the great majority of the statute and rules are administrative in nature and are not necessary in the field. Those pages that address technical issues can easily be printed from the CD or Web site and used in the field. The CD also includes every form and application that you will need for licensing, certification, continuing education, plan review, etc. This is much more information than we could afford to print and distribute to all of our stakeholders.

The CD cost about $48,000 to print and distribute. This compares to $150,000 to print and mail the RCW-WAC documents without the additional forms. The CD is clearly the most efficient distribution method. There have been no fee increases in two of the past five years in the Electrical Program because the department and the Electrical Board have been willing to utilize new technology whenever possible.

We realize that some people will be unhappy with the decision. Some always are. In addition to a few complaints, we have received many accolades for being proactive in utilizing our resources to the best
advantage and in fact doing a better job of ensuring everyone who is regulated by our laws is informed of those laws.

- **Certification Must Be Shown To An Inspector**

The statement on the back of your certification card is clear. "You must be prepared to show this card to a Department of Labor and Industries inspector. You cannot allow anyone else to use this card. You may be asked to provide a second piece of identification."

RCW 19.28.321 requires L&I and city electrical inspectors to "enforce the provisions of this chapter in their respective jurisdictions." If an electrical inspector observes the work you have done or are doing under chapter 19.28 RCW, you must present your electrician or training certification and other means of identification when asked. If this request is refused the electrical contractor and administrator, and the individual worker will be subject to citation by the department.

- **Approval Of Class 2 Transformer Load-Side Equipment And Devices**

Unlisted Class 2 transformer load devices and utilization equipment are acceptable when all the following criteria are met:

1. The Class 2 transformer is listed.
2. The wiring method used complies with NEC 725.
3. The secondary voltage of the Class 2 transformer does not exceed 30 volts AC or 42.4 volts peak open circuit voltage.
4. The secondary side of the Class 2 transformer is protected by a 5-ampere maximum fuse or a fuse derived by dividing 100 VA by the secondary voltage whichever is less.
5. The Class 2 circuit does not supply life safety equipment or emergency egress, such as fire alarm or rescue systems or is not associated with classified (hazardous) locations.
6. The equipment and devices must be totally within the secondary of the Class 2 circuit (that is, the device is not in any way electrically connected to any other electric source).
7. A permanent marking located as near as possible to the transformer must indicate the size and type of the replacement fuse, or the fusing is integrated into the transformer assembly and the whole unit must be replaced.

- **A Reproduction Of A General Journeyman Card Turns Up In Bothell**

Chris G. Morris, Bonair Place, Seattle, an expired electrical trainee, creatively gave himself a quick promotion to general journeyman. The certificate the department obtained from his employer appeared to be a real journeyman card (borrowed or stolen) that has been altered. Morris received multiple double penalty citations for a fraudulent certificate and working without a current certificate. His employer terminated his employment.

The moral of the story? All electrical contractors should use the "Look Up a Contractor, Plumber or Electrician" link at [http://www.lni.wa.gov/TradesLicensing/Contractors/HireCon/](http://www.lni.wa.gov/TradesLicensing/Contractors/HireCon/) to verify the certification status of their current (or potential) electrician or trainee employees. The worker cannot alter the certificate status in the online database. The department will take no penalty action against a contractor, administrator, or electrician that discovers this type of fraud and cooperates by providing information and evidence.

- **Electrical Program Is Working With Other States**

The Electrical Program is coordinating the development of electrical exams with other states. Chief Electrical Inspector, Ron Fuller, presented a proposal for other reciprocal states to join with Washington to develop comprehensive examinations with questions suitable for all states. Montana is already working with Washington and interest has been shown from other reciprocal states. Coordination with other states offers improved validity for our examinations and will help reduce the work required to update and maintain the extensive database required for examinations.

Washington currently reciprocates (01-Journeyman Certification) with Alaska, Arkansas, Colorado, Idaho, Massachusetts, Minnesota, Montana, Nebraska, North Dakota, South Dakota, Utah, and Wyoming. Oklahoma and New Hampshire will likely join the group this year and several other states with electrical programs have expressed interest in gaining reciprocity.
Borrowing Electricians

To loan your employees to another electrical contractor, the simplest arrangement is to release them to the other contractor and have them on that contractor’s payroll for the project time period. This way there is no question of responsibilities or control.

If you retain employees on your payroll and supply labor to another contractor you must meet the same requirements as any construction employment agency. The department must make sure the intent of chapter 19.28 RCW is met. When you share labor there must be a written contract between the two parties prior to loaning the workers. The contract must state the duration of the loan period and the individual(s) involved. The contractor loaning the labor must give up the ability to recall the workers until they are released by the borrower, even though they remain on the payroll of the loaning contractor. Since the loaning contractor gives up “control” of the employees, the contract is limited to one continuous time period.

The electrical contractor borrowing the electrician has complete control of the individual during the duration of the contract. This means that the borrower must have the ability to dispatch, retain, and terminate the individual involved in the contract. The individual electrician (or trainee) must be properly certified for the work they are performing. The borrower must be a licensed electrical contractor. The contractor borrowing the labor will be held responsible for the performance and proper supervision (including affidavits of experience for trainees) of the loaned individual.

Mounting Or Supporting Nonmetallic Boxes

Save yourself the time and expense of a return trip to your jobsite to fix electrical corrections. Our inspectors would like to avoid a re-inspection trip as well. Contractors and installers need to be aware that NEC 314.43 has specific requirements for securing and supporting nonmetallic boxes.

Provisions for support of nonmetallic boxes must be outside of the box, or the box must be constructed to prevent the accidental contact of the conductors in the box and the mounting screws. Manufacturers must construct boxes to these requirements. Installers cannot field modify a nonmetallic box in a difficult mounting situation and drill holes in the sidewalls, ends, or back to secure it with screws from the inside.

Electrical Question Of The Month

This Month’s Question: When the equipment grounding conductor is not part of a cable assembly, what is the minimum copper equipment grounding conductor size for 100 amp, 12,470 volt ungrounded conductors with 60 amp overcurrent protection? A) 10 AWG, B) 8 AWG, C) 6 AWG, D) 4 AWG.

Last Month’s Question: “Like-in-kind" means having similar characteristics such as voltage requirements, current draw and function, and being in the same place. Like-in-kind replacement of which of the following equipment requires an electrical work permit and inspection? A) 7½ HP, 240V motor, B) household electric water heater, C) both A) and B), D) neither A) or B). The answer is: D) [WAC 296-46B-900(8), RCW 19.28.006(2), and RCW 19.28.101(1)]

Quarterly Compliance Report

This report lists the final judgments for: no electrical contractor’s license, hiring uncertified electricians, no electrician certification, and failure to obtain necessary electrical work permits. The report is also posted on the Electrical Program website. The following firms and persons received a final judgment during the 3rd quarter of 2004. A final judgment means that all rights of appeal have been exhausted and a penalty is due or has been paid.
