Hi Dave,

Can you have someone respond to Kayla.

Hello,

I am reaching out because I beleive OSHA should require that workplaces have good air quality for workers.

Reason being:

Right now most of Western Washington is experiencing Very Unhealthy - Hazardous air quality. This happens every year and every year regardless of warnings of adverse health reactions and the unknown long term effects of being exposed to this poor air quality, people are still required to goto work as normal as if nothing were different.

I beleive this is a violation of human rights and it should be enforced that employers have to ensure proper ventilation, air purifiers, air quality monitors or access to the proper PPE while working to protect against disease for the safety of their workers from both short term and long term health conditions.

I really hope I can get this message out there and that OSHA will consider implementing policies to help protect workers.

Thank you.
